**ALTAIR 8800b**  
**SECTION I**  
**INTRODUCTION**

## SECTION I

### INTRODUCTION

#### 1-1. SCOPE

This ALTAIR™8800b Documentation provides a general description of the various printed circuit cards contained in the ALTAIR 8800b and detailed theory of their operation. Included in the documentation is an operator's guide which familiarizes the operator with the various switches and indicators on the ALTAIR 8800b front panel. Detailed assembly instructions are also provided.

#### 1-2. ARRANGEMENT

This manual contains five sections as follows:

1. Section I contains a general description of the ALTAIR 8800b computer and associated printed circuit cards.
2. Section II contains information on the controls and indicators which are located on the ALTAIR 8800b front panel.
3. Section III contains a detailed theory explanation of the ALTAIR 8800b circuit operation.
4. Section IV contains troubleshooting information for the ALTAIR 8800b.
5. Section V contains the detailed assembly instructions for the ALTAIR 8800b.

#### 1-3. DESCRIPTION

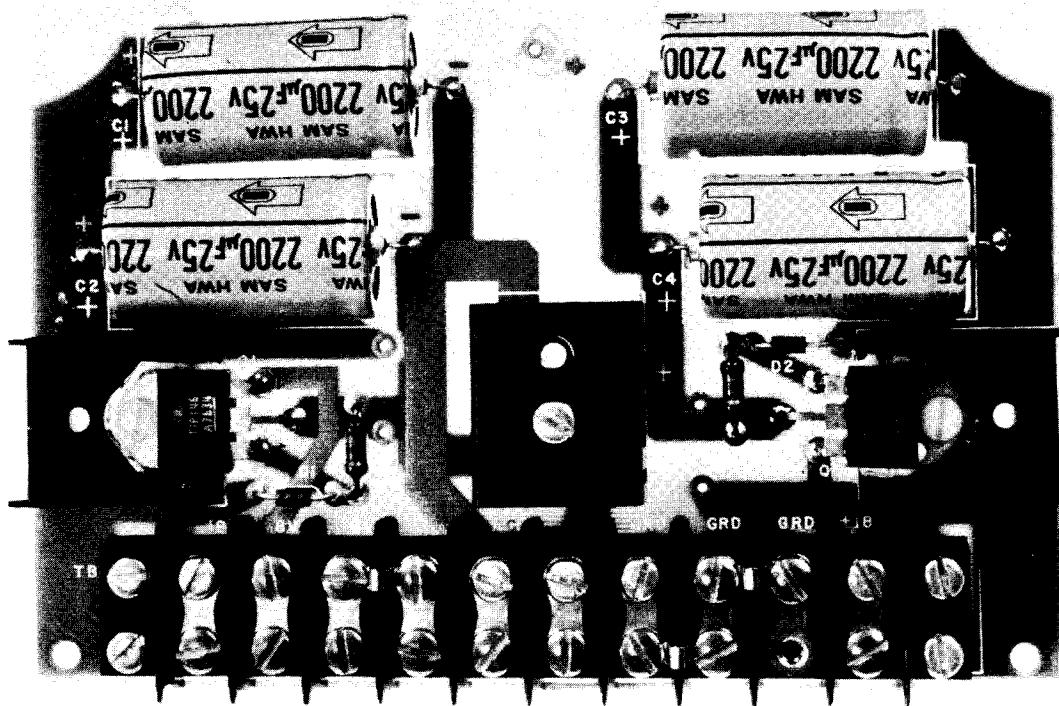

The ALTAIR 8800b computer (Figure 1-1) is a general purpose, byte-oriented machine (8-bit word). It uses a common 100-pin bus structure that allows for expansion of either standard or custom plug-in modules. It supports up to 64K of directly addressable memory and can address 256 separate input and output devices. The ALTAIR 8800b computer has 78 basic machine language instructions and consists of a power supply board, an interface board, a central processing unit (CPU) board, and a display/control board.

#### 1-4. POWER SUPPLY BOARD (Figure 1-2)

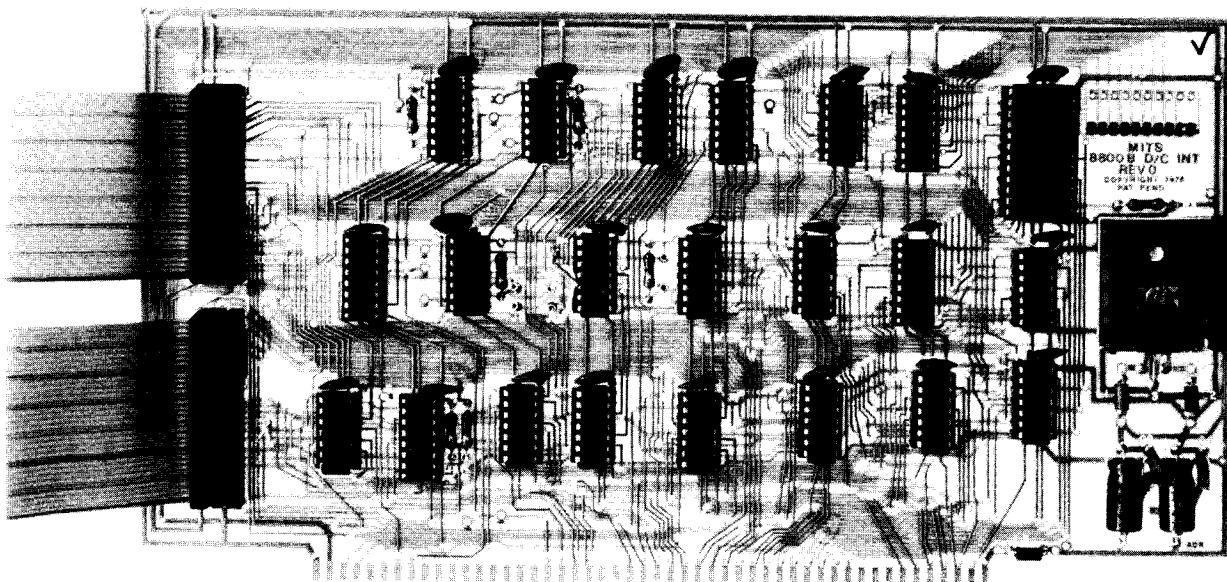

The Power Supply Board provides two of the three output voltages to the ALTAIR 8800b computer bus, a positive and negative 18 volts. It includes a bridge rectifier circuit and associated filter capacitors, a 10-pin terminal block connector, and the regulating transistors for the positive and negative 18 volt supplies.

#### 1-5. INTERFACE BOARD (Figure 1-3)

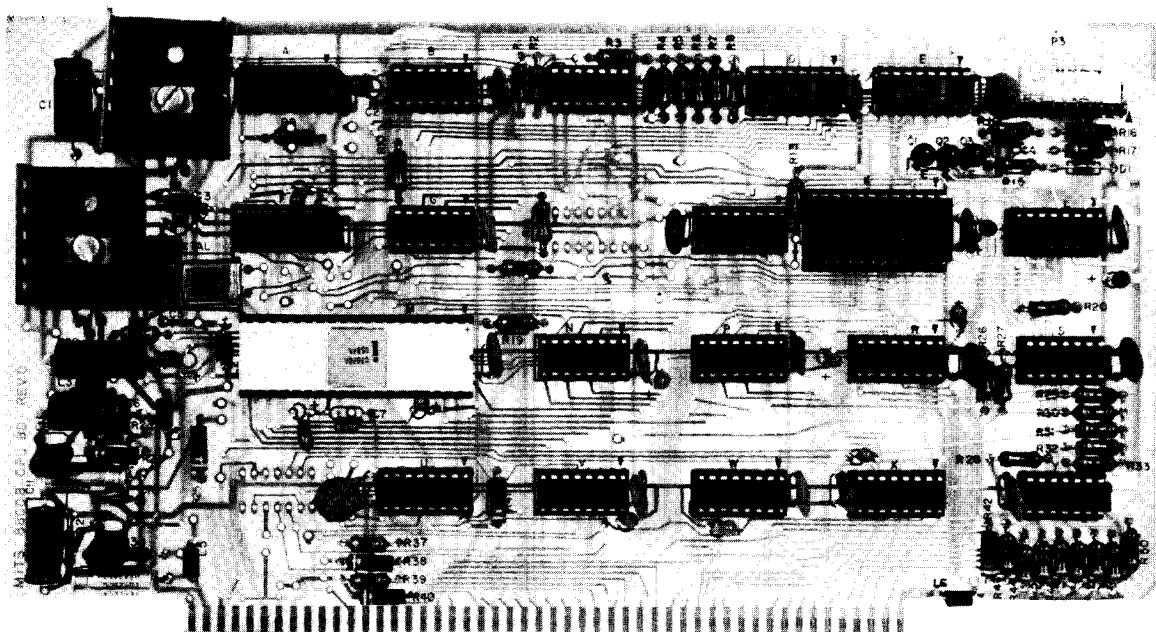

The Interface Board buffers all signals between the display/control board and the ALTAIR 8800b bus. It also contains eight parallel data lines which transfer data to the CPU from the Display/Control board.

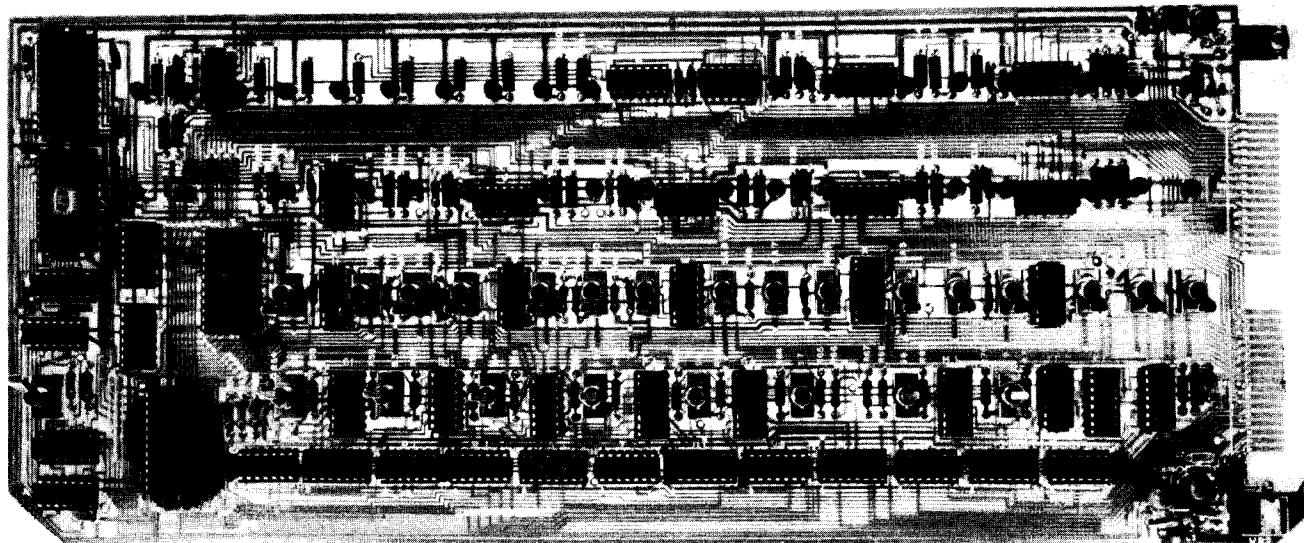

**Figure 2.** Power Supply Board

**Figure 3.** Interface Board

**Figure 4.** CPU Board

**Figure 5.** Display/Control Board

#### 1-6. CPU BOARD (Figure 1-4)

The CPU board controls and processes all instructions and data within the ALTAIR 8800b computer. It contains the Intel Corporation model 8080A microprocessor circuit, the master timing circuit, eight input and eight output data lines to the ALTAIR bus control circuits.

#### 1-7. DISPLAY/CONTROL BOARD (Figure 1-5)

The Display/Control Board conditions all ALTAIR 8800b front panel switches and receives information to be displayed on the front panel. It contains a programmable read only memory (PROM), switch and display control circuits, and control circuits to condition the CPU.
